BIBLIOGRAPHY ON AUTOMATION AND TECHNOLOGICAL CHANGE AND STUDIES OF THE FUTURE

Annette Harrison*

Consultant, The RAND Corporation, Santa Monica, California

INTRODUCTION

This Bibliography lists works associated with two Rand projects: Automation and Technological Change, and a related informal study of future national and international problems.

The current listing of approximately 800 entries includes materials assembled by members of the project, together with some 400 additional entries published after 1967, selected largely from the Library of Congress card catalog.

A word of explanation may be in order with respect to the imprint dates found in several entries in this Bibliography. In the absence of specific information in the book on the date of publication or copyright date, it is desirable and necessary to indicate the closest probable date of publication from evidence found in the book itself (text or bibliography) or from available reference sources. Hence, a date followed by a question mark (i.e., 1969?) indicates a probable date of publication. In some instances, the book and reference sources fail to provide a probable date, so a probable decade of publication is indicated instead with a dash and a question mark (i.e., 196-?).

This Bibliography will be updated periodically.

The Appendix lists organizations engaged in future-oriented work.
